

Vendor Radar Risk

Continuous, cited vendor-risk intelligence from the live web — with **Blast Radius** cascade detection that tells you which connected vendors to investigate, and when.

Bright Data SERP

Hosted MCP

THE PROBLEM

You learn your vendor was breached **from the news** — weeks late.

- ▶ Enterprises depend on dozens of third parties — identity, CRM, data, CDN.
- ▶ Worse: breaches cascade. One stolen OAuth token or compromised identity provider spreads to every connected vendor.
- ▶ Companies have a vendor list — but zero visibility into the connections between vendors.
- ▶ So they can't answer the only question that matters: “Which of my other vendors are now exposed, and do I act today?”

WHY NOW

The 2024–2026 breach story is **connection risk**.

SALESLOFT-DRIFT

One OAuth token cascade reached 700+ orgs — Salesforce, GitHub, CrowdStrike, Slack.

OKTA → CLOUDFLARE

Stolen Okta credentials pivoted into Cloudflare's internal Atlassian.

SNOWFLAKE

Third-party integrator tokens exposed downstream customer data.

Vendor scores in isolation miss this entirely. The risk lives **between** vendors.

OUR SOLUTION

Turn the **live web** into continuous, cited risk intelligence.

DISCOVER

Real-time sweep of Google News, breach trackers, CVE feeds, status pages & regulatory portals — per vendor.

EXTRACT

AI converts raw pages into structured risk signals. Every signal needs a real source URL — never invented.

SCORE

Transparent 0–100 risk score with recency decay and vendor-criticality weighting.

ACT

Alerts on new signals + Blast Radius verdicts on cross-vendor cascades.

Blast Radius — cascade exposure detection

Reads recent security incidents across all vendors, auto-discovers the connections (shared attacker, OAuth token, identity provider, cross-vendor mention), clusters them, and issues a verdict per incident.

 **INVESTIGATE NOW**

Salesloft-Drift incident · connected by **salesloft · drift · oauth**

CrowdStrike

GitHub

Salesforce

Slack

→ Rotate shared tokens and audit the integrations now. **(4 cited sources)**

Correctly separates the 4-vendor OAuth cascade from the Okta–Cloudflare identity incident.

One pipeline, fully cited, end to end

3 Bright Data products + AI + MCP

BRIGHT DATA SERP API

Live Google News discovery — the freshness engine. 6 risk-category queries per vendor.

BRIGHT DATA WEB UNLOCKER

Bypasses bot protection on breach trackers & trust centers. Provable 403→200.

MCP SERVER (HOSTED)

Our own MCP server, online over SSE — agent-native risk tools.

Hugging Face Spaces

GitHub Actions CI

Pytest ×50

It's **live**, not slideware

- ▶ **Dashboard** — 10 vendors, color-coded scores, risk-landscape radar.
- ▶ **Blast Radius** — the Salesloft cascade with INVESTIGATE verdict + citations.
- ▶ **403 → 200 proof** — naive fetch blocked, Web Unlocker succeeds, side by side.
- ▶ **Live scan** — click Scan; ~40s later fresh, dated, cited signals appear.
- ▶ **Hosted MCP** — ask Claude “Am I exposed to a cascading breach this week?”

suriya911-third-party-risk-radar.hf.space

Real data, real cascades, shipped.

94.8

Okta — Critical, from cited incidents

2

distinct cascades auto-detected

68→87

Salesforce live-scan score jump

50

tests passing · CI green

- ▶ Live scan verified on the hosted Space — fresh sources (securityweek, cybernews), never mocked.
- ▶ Deployed as one Docker container on Hugging Face Spaces; MCP online over SSE.

WHY IT WINS

Solves the **unsolved** part of vendor risk

REAL PROBLEM

Cascade breaches are THE 2024–2026 enterprise security story. We address it head-on.

NOVEL

Everyone scores vendors in isolation. Nobody auto-maps the live connection graph.

DEEP BRIGHT DATA USE

SERP + Web Unlocker are core to the product, not bolted on.

AGENT-NATIVE

Hosted MCP makes the whole system usable by any AI agent.

From hackathon to product

- ▶ Continuous scheduled scans + Slack/email cascade alerts.
- ▶ Deeper connection graph: shared sub-processors & 4th-party dependencies.
- ▶ Score-history trends and exposure-over-time per cascade.
- ▶ CSV/SSO vendor import for real enterprise portfolios.

THANK YOU

Know **first**. Not from the news.
